who has a profession in interior design, architectural restoration, accessible design, furniture design, product design-development and manufacturing, online marketing, strategic design and brand management, design thinking, creative brand positioning.

Dönmez is volunteering for Alternative Life Association since 2014. He has designed and built buildings. Besides of it he have been in social and educational projects for different age groups.

Our stories

A short story about equity for children with disabilities

Abdullah Dönmez

Once upon a time, in a small town called Equality, there lived two children named Emily and David. Emily was a bright and curious girl who loved to read books, while David was a cheerful and adventurous boy who loved to play outside. However, there was something that set them apart from other children - Emily had a visual impairment, while David had a hearing impairment.

Despite their disabilities, Emily and David had a lot of potential and talent, but they faced many challenges in their daily lives. Emily struggled to read books because the letters on the page were blurry, while David found it hard to communicate with his friends because they didn't know sign language.

One day, their school decided to launch a program to promote equity for children with disabilities. The program included a range of measures such as providing accessible learning materials for Emily, and sign language classes for David's friends. The teachers and students also received training on how to be more inclusive and understanding towards children with disabilities.

Emily and David were thrilled with the program, and they quickly began to thrive in their studies and social lives. Emily was now able to read books with the help of a magnifying glass, while David's

friends were excited to learn sign language and communicate with him better.

As time passed, Emily and David's talents and abilities were recognized and celebrated, and they became an integral part of their school community. They were no longer seen as children with disabilities, but as valued members of the community who contributed in their unique ways.

The program's success inspired other schools in the town and beyond to launch similar initiatives, promoting equity and inclusion for all children with disabilities.

In the end, Emily and David's story taught the town of Equality an important lesson - that every child deserves an equal chance to succeed and be happy, regardless of their differences or disabilities.

A short story about equity for people with disabilities,

Once upon a time, in a town called Harmony, there lived a young man named Alex. Alex was a bright and ambitious young man, with a passion for music and a talent for playing the guitar. However, Alex was born with a disability - he had a visual impairment that made it difficult for him to read music and navigate the world around him.

Despite his disability, Alex was determined to pursue his dream of becoming a musician. He practiced tirelessly, relying on his ears and his memory to learn new songs and perfect his technique. However, he often faced barriers and discrimination in a world that did not always accommodate for people with disabilities.

One day, the town of Harmony launched a program to promote equity for people with disabilities. The program included a range of

measures to support people with disabilities and ensure that they had equal access to opportunities and resources.

The program included accessible buildings and public spaces, sign language interpreters, and assistive technologies for people with hearing or visual impairments. The program also included training for employers and businesses on how to be more inclusive and accommodating towards people with disabilities.

Thanks to the program, Alex was able to pursue his passion for music without facing the same barriers he once did. He performed at local events and venues, with the support of sign language interpreters and accessible technology. He was able to connect with other musicians and collaborate on new projects, and he even started his own band.

Alex's story inspired the people of Harmony to be more inclusive and understanding towards people with disabilities. They realized that everyone has unique talents and abilities, and that by creating a more equitable and inclusive society, they could unlock the full potential of every person, regardless of their abilities or disabilities. In the end, the program was a great success, and Harmony became known as a town where everyone was valued and included, regardless of their differences or disabilities.

A short story about equity for older people with disabilities,
Once upon a time, there was an elderly woman named Maria who had a physical disability that made it difficult for her to move around. She had lived her entire life in a small village in a remote part of the country where people with disabilities were often marginalized and forgotten.

As Maria grew older, she began to realize that she was not being treated fairly by her community. She was unable to attend local events or even visit her friends because the buildings were not wheelchair accessible. The roads were unpaved and uneven, making it nearly impossible for her to leave her house without assistance.

One day, Maria decided that she had had enough. She went to her local government office and demanded that they make changes to the village to make it more equitable for people with disabilities like herself. She spoke passionately about the need for wheelchair ramps, accessible buildings, and smoother roads.

At first, the government officials were hesitant to listen to Maria's demands. They had never considered the needs of people with disabilities before, and they didn't think it was a priority. But Maria persisted, and eventually, the officials began to understand the importance of equity for older people with disabilities.

Together, they worked to make the necessary changes to the village. They built ramps and widened doorways, and they paved the roads so that they were accessible to people with disabilities. Maria was overjoyed to see the village she had known her entire life become a place where she could move around freely and independently.

Thanks to Maria's advocacy and the willingness of the government officials to listen, the village became a model for other communities in the country. Older people with disabilities in other parts of the country began to demand similar changes, and slowly but surely, equity for older people with disabilities became a national priority.

Maria never stopped advocating for herself and others like her. She became a respected community leader, and her legacy lives on as a champion for equity and inclusivity for people with disabilities.

When we ask

short story about equity for children with disabilities

short story about equity for people with disabilities

short story about equity for older people with disabilities

What is ChatGPT? It is a large language model developed by OpenAI, based on the GPT-3.5 architecture. It is designed to generate human-like responses to a wide range of natural language inputs, including text-based conversation, questions, and commands.

How ChatGPT generate these stories? It works by using a deep learning algorithm known as a transformer model, which is a type of neural network that is particularly well-suited for processing natural language data.

Simply using our internet network database and generating responses by its own algorithm.

As we see on the first story, Emily and David as children, on second story Alex as young person and on the third story Maria as an older person have similar problem related with their disability.

We all know very similar stories like them. We all see lots of similar maybe completely same problems they had. ChatGPT is generating our realty.

I asked another story from ChatGPT and this time question was 'story about a kid with disability who is superhero'

Once upon a time, there was a young boy named Max who was born with a rare genetic disorder that left him unable to walk without the aid of a wheelchair. Max was often teased by other children for his disability, which left him feeling alone and isolated.

But Max had a secret that he kept from everyone else. Whenever he put on his superhero cape and mask, he felt like he could do anything. He imagined himself flying through the air and fighting off villains with incredible strength and agility. In his mind, he was the greatest superhero the world had ever seen.

One day, Max stumbled upon a group of bullies who were picking on a group of younger children. Without hesitating, Max donned his superhero outfit and jumped into action. The bullies were shocked to see Max standing up to them, but Max was fearless. Using his wit and intelligence, Max was able to outsmart the bullies and send them running for cover.

From that day forward, Max knew that he had a purpose in life. He became known as the "Wheelchair Warrior," a superhero who used his intelligence, strength, and compassion to protect those in need. Max's disability had once been his greatest burden, but now it was his greatest gift. He was a true superhero, and nothing could stop him.

Even when we ask a story about a kid with disability who is superhero, Max who is greatest superhero the world had ever seen, fights against of bullies. What a terrible social memory.

Nowadays, as we can see technology is one of the real superhero. Technology has the potential to help solve inequality in a number of ways:

Access to Information, access to Education, access to healthcare, access to job opportunities, equal opportunity for entrepreneurship, increased efficiency, financial Inclusion.

Overall, we just had Covid-19 Pandemic. We all remember how all the world were fighting with it. People did not even go out of home for months. During these time we all had advantage of technology on communications, working, healthcare, shopping, banking, education etc. Scientist has great benefit of technology to finding out a solution. They did not only wish a good luck to world, they all put their hands under the stone. We can clearly see that when we wish to solve any problem, even most difficult ones, we are able.

After all, I believe that we have a very short way which looks long.
